

## Statistics 10 Midterm 2 Results

Mean =71.9 or about 80%

Standard Deviation =12.1

Median =74

High =90 (1)

Low =23 (1)

There were 3 forms. There were no statistically significant differences in the average scores between forms.

Keys will be posted on Thursday, I apologize for the delay.

This is very premature, but as of today, this is probably how you should think about your grade on the second midterm:

A's (A+/A/A-) 81-90

B's (B+/B/B-) 71-80

C's (C+/C) 46-70

Below a 46 is a C- or lower grade

Please make an effort to see me or talk to your TA if you are at or near the bottom of the class. Going into the final, here is a rough guideline of where you stand with respect to your classmates. This does not include homework scores:

A's (A+/A/A-) 112-135

B's (B+/B/B-) 97-111

C's (C+/C) 62-96

Below 62 means that you do not have a passing grade going into the final. Please attempt to speak with or e-mail me if you are in this category.

Remember, the final is 40%, it is cumulative but weighted towards untested material (Chapters 23, 26, 8, 9, 10.1, 10.3, 12.1) there will be 120 points on the final.

If you plan to contest your examination grade, please read the instructions found in the syllabus. You have until 5pm on June 1, 2001 to submit a challenge in writing. E-mail is considered "in writing".
